

SquareUp Terminal (Card Holder Present) Tab

The screenshot shows a software interface for a sales order. The title bar reads "Sales Order - SO-000408 - A Toy Customer UK Ltd". The interface is divided into several sections:

- Payment Information:** Includes fields for "Received From" (A Toy Customer UK Ltd), "Payment Type" (SquareUp), "Amount Paid" (£ 377.99), "Date Paid" (23/03/2023), "Currency" (GBP), and "Notes".
- Payment Method Information:** Includes fields for "Cheque Number", "Account" (with radio buttons for "Undeposited" and "Deposit"), "Bank Account" (BNKAC-000003), "Paying Slip", "Bank Currency Value" (£ 377.92), and a "Card Holder Present Terminal" button.
- Approved / Failed:** Includes fields for "Approved / Failed", "Approved Ref", and "Last Modified User Date Time".
- Payment List:** A table with columns: "ReceivableCode", "DatePaid", "PaymentMethod", and "TotalAmount".

The bottom right corner of the window shows "£ 0.00" and the status "Ready".

This is only available in the sales order and invoice forms. (This is also used in the Trade Counter plugin).

The tab allows you to send the value of the receipt to a PDQ machine and if successful add the receipt. You can enter multiple receipts this way if a customer wants to different values on different cards. You would need a SquareUp terminal for this to work.
