Connx Integration Logic Notes

Connx have used our API to integrate their WMS with Interprise. You may already have our API plugin.

Interprise would still deal with CRM, Customer, Supplier, Sales Orders, Purchase Orders, Stock, Accounts, Banking, etc.

Connx deals with you barcode picking sales orders from Interprise, barcode GRNing purchase orders from Interprise, plus other warehouse tasks like locations, barcode stock take and transfers.

The integration works based on the following logic :

Default – Use Connx Locations, Serial Batch

There is no point having this information in both applications. We have a memo field in SO item lines and GRN items lines for the serial batch information (if any) so the user could print on paper work like the sales invoice if you wanted to. Interprise would have 1 location per item (like Location1) as we have to have a minimum of 1. We could use Location1 for all items or have different locations per item i.e. 1 location per item in Interprise.

If you have already setup Interprise Locations

If you are using Interprise Locations we would expect to revert back to Location1 as this is replaced with Connx locations. All stock in Interprise would be put into 1 default location. This will mean a stock take in Interprise to move stock to the 1 location.

There is no point in replicating stock movements between systems when in sales order processing all we need to know is how many in stock, allocated and free stock. Connx would deal with where they are in the warehouse.

If you use Interprise Locations and Serial Batch

It would be preferable to move Serial and Batch to Connx. If you still need to do serial batch in Interprise then we would still go with 1 Location per item in Interprise and Connx deals with locations.

By not using Interprise locations as well as locations in Connx it simplifies the volume of transactions. i.e. Stock transfers in Connx do not need to be replicated in Interprise if only 1 location.

Carrier Integration, Own Delivery and Packing Station plugin.

We would like users to continue to use our Packing Station as this links to Carriers and Own delivery software. It also Confirms pick or Dispatch the Qty picked field would be updated.
