

Auto Generate PO Routine Improvement

The normal criteria is the same but with the following changes:

If the item in item setup is ticked as Drop Ship or Special Order by default then we now exclude them from the output. i.e. we don't want to be ordering them here. You would drop ship from the sales order or in bulk routine etc.

If Reorder or Min Max is chosen we also include items that have a -ve potential stock if they don't have a Reorder or Min level set.
